

To Whom this may Concern,

Over the last 16 years I have worked with the agricultural, energy, and pharmaceutical sectors. However my drive to improve efficiency and evolve new ideas for sustainability remains my goal.

As Chief Horticultural Officer on the team that secured funding and developed the first Solar Thermal Desalination Greenhouse (Highest CAPEX for a horticultural project in Australian history), I had to work closely with our board of directors and pitch to investors. Simultaneously, I oversaw that our produce met government standards while operations ran smoothly.

Currently I lead several high-tech cannabis facilities in Canada, implementing systems and troubleshooting daily operations with a wide range of grow teams. Analyzing data, scheduling crop cycles, reviewing team efficiency to solve bottlenecks improve production and quality, both essential for success. Team building and training lead to a positive culture with a motivated workforce.

Health Canada has challenged me with audits and other reviews. All have been successfully completed by working closely with different quality assurance teams. I believe my true passion is the development of profitable environmentally conscious industries. I am always encouraged to explore new ideas and concepts.

I have attached a video which demonstrates my enthusiasm for cutting edge concepts. Thank you for taking the time to peruse the following:
